## JOURNAL 29

**Front cover**

Rolls Royce West Works, former engine works headquarters building (D) from the east showing engine motifs (15 March 1995)

**Back cover**

This photograph shows a wind engine similar to that which was installed at the Odd Down Fuller's Earth Works some time before 1890 and burnt down in 1908. The illustration comes from a catalogue of the US Wind Engine and Pumping Coy. of Batavia, Ill., dating from about 1905. At present the only clue to the identification of the site is the name of the Midland Railway on the flat horse-drawn wagons. Illustration by courtesy of T. Lindsay Baker, editor, Windmillers' Gazette, Texas USA.
